EXPERIENCE //

McKinsey Digital

Raleigh, NC

Engineer II

MAR 2023 - PRESENT Supply Chain Optimization React, NestJS, Postgres, AWS

Creating a supply chain planning system to accelerate the monthly process for a large vehicle manufacturer. Optimized client-side calculation logic, creating 5x speedup. Coordinated API contract across development and data teams.

Distributed Automated Testing Orchestration

Python, Selenium, OpenCV, RPC

Created bespoke end-to-end test suite, synchronizing state across multiple medical device VMs. Implemented a TCP-based RPC protocol in an orchestrator/worker pattern and computer vision to validate software behavior.

Payment Assistance Digital Journey

Angular, AWS Lambda, Sitecore

Created a centralized portal for financially challenged energy customers to find payment assistance programs. Coached client developers to cleaner code through PR reviews and problem-solving sessions. Implemented a custom SVG layout engine for a unique UI element.

Field Service Schedule Optimization

React, Express, Postgres, Azure

Created a scheduling optimization solution for field workers at a utility company. Implemented a full-stack dashboard for planners to manually adjust schedules, with consideration for traceability and plan version control.

Brawlhalla Esports, Blue Mammoth Games

Atlanta, GA

Software Developer, Part-Time

Odin's Journal \(\bar{\cap}\)

OCT 2021 - FEB 2023 React, Twitch PubSub, AWS S3, AWS Lambda

Designed and built a Twitch Extension to enhance viewership experience by overlaying interactive statistics, tournament bracket updates, and viewer votes. Delivered a concurrent live experience to 30,000 viewers.

Website Redesign 🗹

Figma, SvelteKit, WordPress, AWS

Redesigned brawlhalla.com, migrating from a Divi-powered WordPress theme to a headless WordPress CMS with a SvelteKit front-end. Deployed site consistently crosses 25,000 pageviews per day.

Stream Toolkit (Gjallarhorn) \$\forall \tau\$

React, Node.js, WebSockets, AWS EC2

Architected a resilient, multi-user, real-time system to inqest tournament data from several systems (start.gg, internal APIs, game spectator clients) and consolidate it for downstream CG software (CharacterWorks, Aston, vMix). An open-source version with a reduced feature set is available for community use.

PROJECTS //

Yarralutics

Next.js, Rust, Tailwind, Azure Service Bus, CF Workers

In-depth performance analytics for Brawlhalla. Website and native Rust client that automatically renders statistics as a post-game overlay. Games are processed by a distributed cluster of worker VMs coordinated through Service Bus.

Rubik's Cube RL Agents

Puthon, TensorFlow, Keras, OpenAl Gym

Machine Learning (CS 4641) end-of-semester project to solve a Rubik's Cube using reinforcement learning. Explored a variety of agents, network architectures, and hyperparameters.

– Telestrator 🖓

Rust, WebRTC, NVENC, NDI, H.264

Freehand illustration tool for sports/esports analysts. A video feed is ingested through NDI, then compressed with NVENC and streamed over WebRTC to an iPad for low-latency telestration.

EDUCATION //

Georgia Institute of Technology Bachelor of Science in Computer Science; Threads: Intelligence, Media; GPA: 3.94	Atlanta, GA AUG 2020 — DEC 2022
CERTIFICATIONS & AWARDS // AWS Certified Solutions Architect - Associate Intl. Silver Medal in Web Technologies at WorldSkills Kazan 🖸 📭	APR 2024 AUG 2019
WRITING // The Ethics of Computer-Generated Content 🖸 Term paper for my CS ethics course at Georgia Tech. Explores the implications of generative models on ownership an	DEC 2022 and productivity.

Reinforcement Learning Adventures

FEB 2020
